Figure 1: linear program in two dimensions An algorithm for linear programming takes A , b and c as input, and returns one of the following three answers: "no solutions exist", if there is no solution x such that $Ax = b$ "the maximum is unbounded", if for any M there is a solution x with $c^T x > M$ return a vector x that satisfies $Ax = b$ and achieves the

LINEAR PROGRAMMING

LINEAR PROGRAMMING 1 Introduction A linear programming problem may be defined as the problem of maximizing or minimizing a linear function subject to linear constraints The constraints may be equalities or inequalities Here is a simple example Find numbers x_1 and x_2 that maximize the sum $x_1 + x_2$ subject to the constraints $x_1 \geq 0$, x_2
